

Quick Guide - Use

Remove and discard protective caps from cartomizer. Screw into battery and your VapCig is now ready to be enjoyed! Each cartomizer carries up to 300 puffs. When your cartomizer is depleted, simply replace with your favorite flavored cartomizer. When your VapCig is in need of a charge, the LED will blink rapidly 10 times.

To charge in the VapCigs USB charger, just screw your battery into the circular end, and plug into any powered USB port such as a computer or portable laptop. You can also use the provided car and wall adapters to charge at home or on the go. **A complete charge will take up to 2-2.5 hours. Note that your VapCig arrives fully charged. Over charging may decrease the life of your battery.**

Please dispose of cartomizers properly after use. Keep away from high temperatures. Keep out of reach of children. Please protect mucous membrane from direct contact with nicotine contained in disposable cartridge. Your new VapCig cartomizers last much longer than ordinary cigarettes. Do not enjoy in excess of time and frequency of an ordinary cigarette. Do not assemble or use while driving. Avoid improper operation. While a substitute for smoking, VapCigs still contain nicotine; use at your own risk

All replacement parts are available through your vendor or online.
