

Quick Guide - Charging

①

Screw battery clock-wise into charger

②

Push in slide lock on bottom to release and extend charger plug. Your VapCig battery's blue LED will light while charging and will turn off when completely charged. A complete charge will take about 2-2.5 hours. *Note that your VapCig arrives fully charged. Over charging may decrease the life of your battery.*

Quick Guide - Use

Remove and discard protective caps from cartomizer. Screw into battery and your VapCig is now ready to be enjoyed! Each cartomizer carries up to 300 puffs. When your cartomizer is depleted, simply replace with your favorite flavored cartomizer. When your VapCig is in need of a charge, the LED will blink rapidly 10 times. Follow charging instructions on other side.

Please dispose of cartomizers properly after use. Keep away from high temperatures. Keep out of reach of children. Please protect mucous membrane from direct contact with nicotine contained in disposable cartridge. Your new VapCig cartomizers last much longer than ordinary cigarettes. Do not enjoy in excess of time and frequency of an ordinary cigarette. Do not assemble or use while driving. Avoid improper operation. While a substitute for smoking, VC Plus still contains nicotine; use at your own risk

All replacement parts are available through your vendor or online.

We hope you love your VapCig! Be sure to tell the store you purchased your VapCig from how happy you are with your new VC Plus!

Don't forget to try all of our flavors!
